

Reclimate Malaysia Biochar Project

Transforming Agricultural Waste into Carbon Value

Project Developer Information

Developer Name: Reclimate Sdn. Bhd.

Registry: Carbon Standards International (CSI)

Methodology: Global Artisan C-Sink

Project Type: Removal

Geographic Scope: Selangor, Kedah, and expansion into Perak, Kelantan and Sabah

Project Overview

Reclimate's Malaysia Biochar Project pioneers circular, climate-positive agriculture by converting agricultural waste into biochar that enhances soil health and sequesters carbon. Operating across Malaysia's key agricultural regions, including the Greater Klang Valley and northern rice-growing districts, the project produces up to 2,500 tonnes of biochar annually. It marks Malaysia's first issuance and trade of biochar-based carbon credits.

By reducing open burning, lowering fertiliser costs by up to 60%, and improving soil resilience, Reclimate delivers scalable, data-driven solutions for carbon removal, regenerative farming, and sustainable waste valorisation, creating measurable climate impact across Malaysia's agricultural landscapes.

Project Highlights

- Verified under Carbon Standards International (CSI)
- Malaysia's first biochar-based carbon project issuance and trade
- Produces up to 2,500 tonnes of biochar annually
- Supports local farmers in adopting sustainable waste management practices
- Advances circular economy and regenerative agriculture across key regions

Co-Benefits

- **Agriculture:** Enhances soil health, fertility, and long-term productivity
- **Community:** Creates sustainable livelihood opportunities and reduces rural air pollution
- **Sustainability:** Aligns with Malaysia's national goals and ASEAN's regional framework for low-carbon and circular development
